STORM TECH

THE ROAD TO SUSTAINABLE HEADWEAR

At Atlantis Caps, we specialize in creating top-quality headwear with passion, care, and mindfulness of our responsibility to the world and the people around us.

We use only the finest materials to ensure our products are of the highest quality, and our commitment to sustainability ensures that we are doing our part for the environment.

SUSTAINABLE FABRICS

ORGANIC COTTON

Organically grown cotton comes from controlled and certified crops, supporting biodiversity and healthier ecosystems. As a result, water use is significantly reduced, soil fertility is maintained, and the working conditions and health of farmers and their families are improved.

RECYCLED POLYESTER

Recycled polyester, or rPET, is made from polymers obtained by melting down used plastic bottles and converting them into textile fibers. Did you know that nearly 1 million plastic bottles are purchased worldwide every minute?

POLYLANA®

Polylana® fiber allows to be blended with any natural and synthetic fiber to enhance and adjust performance, look, or other characteristics of the final product. Polylana® fiber can be dyed at low temperatures giving the yarn, once knitted, a delicacy and also a unique consistency.

RECYCLED COTTON

Recycled cotton fabrics use pre & post consumer waste and less virgin cotton. It reduces the negative impacts of cotton farming like water consumption, CO2 emissions, intensive land use, and gives a new life to textile waste.

RECYCLED NYLON

Recycled nylon is made from nylon waste from products that have already been manufactured, sold, used, and then discarded by consumers. It can also be made from the waste that's left over during the processes where nylon is made into a product.

2025

THE ENTIRE ATLANTIS HEADWEAR COLLECTION WILL BE PRODUCED WITHIN A SUSTAINABLE MINDSET, BY USING CERTIFIED MATERIALS AND PRODUCTION PROCESSES WITH A LOWER IMPACT ON OUR ENVIRONMENT BY 2025.

THE REVOLUTION IS COMING.

DYE SUBLIMATION

Sublimation is a printing transfer process which uses heat sensitive sublimation inks to permanently dye synthetic fabrics.

The process, which is called "Dye Sublimation", involves the use of a special heat sensitive dye to print your design onto paper. The printed paper is then placed with the synthetic fabric into a heat press and pressed for a pre-determined period.

The sublimation cycle transfers the design from the paper to the fabric. Sublimation is always done on white synthetic materials and at high temperatures.

As the sublimation process actually dyes the fabric, the colour is "in" the fabric and not on top, as is the case with traditional screen printing methods. This gives a much better feel to the product, as well as colour fastness and the ability to print unlimited colours.

As only white fabrics are suitable for sublimation printing, any "white" that you see in a sublimated design will actually be unprinted fabric.

Sublimation gives you the ability to create colourful, long lasting designs on these products - so get creative!
